Profile

Final year undergraduate seeking a Software Engineer role, with strong experience in software development and problem-solving. Skilled in designing, developing, and deploying scalable applications, with a keen interest in backend engineering, system design, and delivering impactful solutions through teamwork and continuous learning.

Experience

PickMe - Digital Mobility Solutions Lanka

Mar 2025 – Sep 2025

Intern Software Engineer

Colombo, Sri Lanka

- Developed microservices in Golang with multi-tenancy support across services, ensuring tenant-specific configurations and scalable architecture.
- Implemented and executed unit testing across backend services.
- Configured monitoring and observability solutions using Grafana, Prometheus, New Relic, and Kibana to improve debugging and system reliability.
- Deployed services across development, staging, and production environments using GitLab CI/CD and Argo CD pipelines.
- Worked with PickMe's MySQL database by writing and optimizing queries within backend services.
- Integrated Apache Kafka for event-driven communication with tenant-specific producers, consumers, and event flows.

Education

University of Moratuwa

Expected Dec 2026

Bachelor of Science (Hons) in Information Technology and Management
(CGPA: 3.73/4.00)

Moratuwa, Sri Lanka

- Dean's List: L1S1 (SGPA: 3.84), L2S2 (SGPA: 4.00)

Zahira College, Kalmunai

2020

G.C.E Advanced Level Examination | Physical Science Stream

Kalmunai, Sri Lanka

Projects

PlayEra - Sport Venue Booking System | Spring Boot, React, React Native, MySQL

Individual Project | Full Stack Developer | Aug 2024 - Dec 2025

Developed a full-stack sports venue booking ecosystem connecting customers with sports venues in Sri Lanka through an integrated mobile app.

- Developed mobile app with real-time venue booking and payment processing.
- Built Spring Boot REST APIs with MySQL database, JWT authentication, and role-based access control for customers and venue owners.
- Integrated Stripe payment gateway with secure transactions and automated booking confirmations
- Created responsive dashboard with booking management, analytics and revenue tracking for venue owners

TransitGO - Bus Transport Management System | Spring Boot, React, React Native, Azure SQL
Group Project | Project Leader, Full Stack Developer | Dec 2023 - Jul 2024

Developed a comprehensive bus transport management system to streamline the operations of public and private bus companies. Features include bus scheduling, real-time live location, delay reporting, package transfer, and lost/found reporting.

- Contributed to both the passenger mobile app and admin web portal, delivering end-to-end functionality.
- Enhanced the passenger experience with schedule previews, feedback/review features, and a lost-and-found reporting system.
- Improved operational efficiency for administrators by developing route, bus, and timetable management modules with real-time update capabilities.

Tutury - Online Class Management System | NextJS, ReactJS
Individual Client Project | Fullstack Developer | Sept 2025 - Jan 2026

Developed an education management platform to streamline class scheduling, fee payments, and student progress tracking.

- Built dashboards for teachers and students with efficient state management to support real-time updates for sessions and payments.
- Optimized frontend performance using Tailwind CSS and modern React patterns to ensure fast load times under varying network conditions

Metro Mobiles - Online Electronic Store | Spring Boot, ReactJS, MySQL
Group Project | Project Leader, Full Stack Developer | Nov 2024 - Dec 2024

Built an online electronics store that provides a seamless platform to browse, purchase, and manage electronic products. The project was built using a microservices architecture, including user service, product service, and ordering service.

- Designed and built a comprehensive product management system, including intuitive user interfaces and robust back-end services for efficient product data handling.
- Conducted unit testing to ensure reliability and functionality. Streamlined store operations and enhanced data management.
- Streamlined store operations and enhanced data management.

Hotel Booking App | ReactJS, Spring Boot, MySQL
Individual Project | Backend Developer | Sept 2024 - Nov 2024

Developed a secure backend for a hotel booking system using modular architecture. Designed and implemented RESTful APIs to manage core functionalities.

Technical Skills

Languages: Java, Go, C, C++

Databases: MySQL, MongoDB, Azure SQL

Frameworks: Spring Boot, React, React Native, NextJS

Other Skills: Github, GitLab, CI/CD, Jira, Figma
